

Who We Are

Boyd Watterson Asset Management, LLC is an SEC-registered investment advisory firm with \$17.4 billion of assets under management*. For 90+ years, we have successfully managed a broad range of fixed income and equity strategies for institutions and individuals alike. With a singular focus on the management of money and a dedication to the satisfaction of our clients' expectations, we offer the benefits of a boutique firm but with the resources usually attributable to much larger asset-management companies.

Our Philosophy and Process

Our fixed income philosophy is centered on our belief that over time, active management can consistently generate excess returns and enhance risk-reward tradeoffs. We believe this is best achieved by taking a more strategic view of macroeconomic and market factors and coupling them with a value-driven decision-making process and the rigorous application of risk-management controls.

Our process focuses on four key sources of excess return or "alpha-drivers" as follows:

- Duration Management
- Sector Allocation
- Yield Curve Positioning
- Security Selection

For each alpha driver, there are specific fundamental factors, momentum indicators, and valuation measures which are analyzed. These sources of alpha are then combined and weighted depending upon product type and scope of the client mandate.

At all stages of the portfolio construction process, risk is identified, measured, and managed to ensure desired risk levels are maintained. This is a highly disciplined, team-managed approach which remains fully invested in what we determine to be attractively valued sectors and securities.

The results are portfolios with expectations of outperforming targeted benchmarks but with less downside volatility. This is achieved with full transparency and without the use of leverage and/or derivative securities.

The Boyd Watterson Advantage

- Time-tested philosophy and proven investment process
- Disciplined, fundamental research-based culture
- Balanced investment approach - top down/bottom up
- Transparent portfolio implementation
- Experienced, tenured team of investment professionals
- Client-oriented benefits of a boutique firm

Objective

Investment Grade Intermediate Fixed Income is a well-diversified, broad market strategy that seeks to generate attractive risk-adjusted returns through a multi-sector approach with focus on investment grade securities, both domestic and international.

Boyd Watterson Asset Management, a wholly-owned subsidiary of Boyd Watterson Holding Co., is an SEC-registered investment adviser that manages a variety of fixed income, real estate, and equity strategies. Registration does not imply a certain level of skill or training. A list of composite descriptions, list of limited distribution pooled fund descriptions, and list of broad distribution pooled fund are available upon request.

Boyd Watterson Asset Management LLC claims compliance with the Global Investment Performance Standards (GIPS®) and has prepared and presented this report in compliance with the GIPS standards. Boyd Watterson Asset Management LLC has been independently verified for the periods July 1, 2000 through March 31, 2022. The verification reports are available upon request. A firm that claims compliance with the GIPS standards must establish policies and procedures for complying with all the applicable requirements of the GIPS standards. Verification provides assurance on whether the firm's policies and procedures related to composite and pooled fund maintenance, as well as the calculation, presentation, and distribution of performance, have been designed in compliance with the GIPS standards and have been implemented on a firm-wide basis. Verification does not provide assurance on the accuracy of any specific performance report.

Results are based on fully discretionary accounts under management, including some accounts no longer with the firm. The annual standard deviation presented is an asset-weighted calculation of performance dispersion for accounts in the composite the entire year. The gross of fees returns are used to calculate composite dispersion and composite 3 year annualized standard deviation. Different types of investments and strategies involve varying levels of risk, and there can be no assurance that any specific investment or investment strategy will be suitable or profitable for a client's or prospective client's portfolio and may result in a loss of principal.

For reasons including variances in holdings among Composite accounts, variances in the investment management fee incurred, market fluctuation, the date on which a client engaged Boyd Watterson's investment management services, and any account contributions or withdrawals, the performance of a specific client's account may vary substantially from Boyd Watterson's composite performance results. Past performance is not indicative of future results.

The U.S. dollar is the currency used to express performance. Returns are presented gross of management fees and include the reinvestment of all income. Actual returns will be reduced by investment advisory fees and other expenses that may be incurred in the management of the account. Fees are collected quarterly, which produces a compounding effect on the total rate of return of management fees. As an example, the effect of investment management fees on the total value of a client's portfolio assuming (a) \$1,000,000 investment, (b) portfolio return of 8% a year, and (c) 1.00% annual investment advisory fee would be \$10,416 in the first year, and cumulative effects of \$59,816 over five years and \$143,430 over ten years. Policies for valuing investments, calculating performance, and preparing GIPS Reports are available upon request.

The Boyd Watterson fixed income fee schedule is 30 bps on the first \$50 million, 25 bps on the next \$50 million, and 20 bps above \$100 million. Fees are based on the characteristics of the account, the client's requirements, and are negotiable. Actual investment advisory fees incurred by clients may vary.

Investment Grade Intermediate Fixed Income Composite - The composite consists of all investment grade intermediate fixed income accounts that are fully discretionary, meet the minimum account size, are fully invested after one quarter, and follow the model account requirements. For comparison purposes it is measured against the Bloomberg Intermediate Gov/Credit Index, which includes U.S. Treasury securities with remaining maturities of more than one year, agency securities, publicly issued U.S. corporate and foreign debentures and secured notes that meet specified maturity, liquidity, and quality requirements. The investment objective is to maximize total return through capital appreciation, income generation, and the preservation of capital. These portfolios are invested in 0-10 year, BBB- rated or better, dollar denominated fixed income securities from various sectors like U.S. Treasuries, Agencies, Corporates, and other non-benchmark sectors. The overall level of risk should be consistent with the risk associated with the benchmark. Returns are generated and risks are minimized through duration management, yield curve structure, sector allocation, security selection, volatility management, and tactical spread management. Illiquid investments, leverage, derivatives, and short positions are not utilized. The minimum account size for this composite is \$1 million. Prior to 6/30/2007, the minimum account size for this composite was \$5 million. Prior to 9/30/2006, balanced portfolio segments were included in this composite and 50% of residual cash was allocated to fixed income segments. The composite was created 12/31/2012. Inception date 6/30/2000. All performance represents actual returns as opposed to model or simulated returns.
